

Figure 1 is a semi-logarithmic plot showing the storage modulus E' (Pa) on the y-axis versus Temperature ($^{\circ}\text{C}$) on the x-axis. The y-axis ranges from $1.E+05$ to $1.E+10$ Pa, and the x-axis ranges from -150 to 200 $^{\circ}\text{C}$. Four curves are plotted, labeled Example 1, Example 2, Example 3, and Example 4. All curves show a sharp drop in E' around 0 $^{\circ}\text{C}$, indicating a glass transition. Example 1 (solid line) has the highest E' values, while Example 4 (dashed line) has the lowest.
